INPATIENT HOSPITAL PAYMENT METHODOLOGY

INTRODUCTION

The South Dakota Medicaid Program has been reimbursing hospitals for inpatient services, with a few exceptions, under a prospective Diagnosis Related Group (DRG) methodology since January 1, 1985.

GENERAL

South Dakota has adopted the federal definitions of Diagnostic Related Groups, the DRG classifications, weights, geometric mean length of stay, and outlier cutoffs as used for the Medicare prospective payment system. The grouper program is updated annually as of October 1 of each year. Beginning with the Medicare grouper version 15 (effective October 1, 1997), South Dakota Medicaid Program specific weight and geometric mean length of stay factors will be established using the latest three years of non-outlier claim data. This three year claim database will be updated annually in order to establish new weight and geometric length of stay factors with each new grouper.

Hospital specific cost per Medicaid discharge amounts were developed for all instate hospitals using Medicare cost reports and non-outlier claim data for these hospital's fiscal year ending after June 30, 1996 and before July 1, 1997. An inflation factor, specific to the hospital's fiscal year end, was applied to the cost per discharge amounts of all hospitals with more than thirty (30) Medicaid discharges during the base year to establish target amounts for the period of October 1, **2002** through September 30, **2003**.

A cap on the target amounts has been established. Under this cap no hospital will be allowed a target amount that exceeds 110% of the statewide weighted average of all target amounts.

Out of state hospitals will be reimbursed on the same basis as the hospital is paid by the Medicaid Agency in the state in which the hospital is located. If the hospital's home state refuses to provide the amount they would pay for a given claim, payment will be at 63% of billed charges. Payment will be for individual discharge or transfer claims only, there will be no annual cost settlement with out of state hospitals.

SPECIFIC DESCRIPTION

Target amounts for non-outlier claims were established by dividing the hospital's average cost per discharge for non-outlier claims by the hospital's case mix index. To ensure budget neutrality, a hospital's target amount will be adjusted annual for any change in that hospital's case mix index resulting from the establishment of new program specific weight factors.

The case mix index for a hospital was calculated by accumulating the weight factors for all claims submitted during the base pericd and dividing by the number of claims.
